Subject: Collision at Houston Ship Channel [Update #2] 0800 USCG Briefing to include shelter in place, injures and ship repair
Date: Tuesday, March 10, 2015 9:11:52 AM

From USCG FOSC:

- All shelter in place has been lifted
- Two dock workers treated by EMS, one was asthmatic and not sure if it was related to MTBE vapors. The other was a crane worker who they think was exposed and took for treatment.
- Goal today is to suppress vapors to manageable levels to allow pumping of product from the ruptured tanks by sundown. This will allow crews to assess damages and see when it will be possible to move the leaking ship (Carla Maersk) to an area where it can be repaired safely out of the way of ship channel traffic.
